

Justin Ribarich

FULL-STACK DEVELOPER | REACT, LARAVEL, DEVOPS & AUTOMATION

justinribarich.com | jribarich98@gmail.com | linkedin.com/in/justin-ribarich | github.com/JustinRibs

PROFESSIONAL SUMMARY

Full-stack developer with 3+ years of experience building and owning production applications in higher education and medical research environments. Maintains a portfolio of 8-10 college-wide applications using React and Laravel, with additional experience in automation, API integrations, Docker, CI/CD, Linux, and infrastructure support.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, PHP, SQL, HTML/CSS

Frameworks: React, Next.js, Redux Toolkit, Node.js, Express, Laravel, React Query, Tailwind CSS

Data & Infrastructure: PostgreSQL, MySQL, MSSQL, MongoDB, Redis, Docker, AWS, Linux, CI/CD

Tools & Integrations: Git, Vite, Webpack, Babel, REDCap API

EXPERIENCE

Full Stack Developer

Aug 2023-Present

NYIT College of Osteopathic Medicine (NYITCOM)

Old Westbury, NY

- Architect, build, and maintain 8-10 full-stack applications used by faculty and staff across two campuses, primarily using React and Laravel.
- Lead development of a custom college-wide replacement for eValue, projected to eliminate approximately \$10,000 in vendor costs while bringing critical workflows and application ownership in-house.
- Designed and developed an NFC-based check-in platform for Parkinson's programs, supporting tap-based attendance, patient-tag assignment, event management, and staff-facing administrative workflows.
- Introduced and implemented the development team's CI/CD pipeline using Docker and Docker Hub, establishing a consistent process for building and deploying applications.
- Own application delivery from stakeholder requirements and architecture through development, containerization, deployment, production support, and continued feature delivery.
- Integrate third-party APIs, including REDCap, and write supporting scripts in multiple languages to automate research and administrative workflows.
- Modernize legacy applications and deliver faculty-requested features that support evolving college and departmental workflows.
- Support Linux-based development and research environments, including production containers, server and network configuration, and custom research workstations.

Software Engineer

Dec 2022-Jul 2023

Caribu

New York, NY

- Built a cross-platform Electron developer tool that analyzed existing applications and identified functions eligible for migration to AWS Lambda and serverless architectures.
- Developed Babel-based dependency analysis and interactive views using React, TypeScript, Redux Toolkit, and React Router, helping developers understand application structure and evaluate refactoring candidates.

EDUCATION

Farmingdale State College

Bachelor of Science in Business Management, Minor in Economics

Farmingdale, NY

Magna Cum Laude
